

The first two-phase peeling from a Korean manufacturer

All-season double phase peeling. This modified acid formula stimulates the biosynthesis process, promotes skin renewal and solves many problems. The effectiveness of this product is ensured by two phases :

Lipophilic and hydrophilic.

The hydrophilic phase starts the processes of renewal and rejuvenation of the skin, restores its structure, visibly tightens the oval of the face.

Lipophilic phase provides optimal hydration of the skin and restores its protective barrier, promotes deep penetration of active ingredients.

The product very gently launches the processes of the skin and is an excellent alternative to injection techniques.

Benefits of BIENPEEL peeling

- Multifunctional
- Instant result and speed of carrying out
- Absence of traces of the procedure
- Suitable for face and body skin
- Perfectly combined with other cosmetic procedures
- The procedure is possible all year round
- It is possible to carry out at any age
- A painless procedure that does not require preparation
